

## **User Testing Summary**

To evaluate the usability of the StudyBuddy prototype, the design was tested with three students. The participants were asked to navigate through the onboarding screens, login page, dashboard, tasks section, and progress tracker without any prior instructions.

### **User 1 Feedback**

The user mentioned that the onboarding screens were simple and easy to understand. They liked the clean layout and felt that the overall design was visually appealing. However, they initially found it difficult to distinguish between completed and pending tasks and suggested making task status indicators more prominent.

### **User 2 Feedback**

The user was able to move between the Dashboard, Tasks, and Progress screens without confusion. They appreciated the consistent color palette and the friendly illustrations used throughout the application. They suggested adding more details to individual tasks, such as deadlines or priority levels, to improve usability.

### **User 3 Feedback**

The user found the login process straightforward and intuitive. They particularly liked the motivational illustrations and the positive tone of the application. They suggested making the progress tracking section more noticeable by increasing the size of the progress indicators and statistics.

## **Improvements Made**

Based on the feedback received during testing, several refinements were incorporated into the prototype:

- Improved navigation flow between screens using interactive bottom navigation.
- Enhanced visual consistency across all screens.
- Refined spacing and alignment of interface elements for better readability.
- Improved task presentation and overall layout organization.
- Added smooth transitions and animations to create a more engaging user experience.

## **Conclusion**

The testing session indicated that users were able to navigate the prototype successfully and understand its core functionality. The feedback received helped identify minor usability improvements and contributed to refining the overall user experience of the StudyBuddy application.
